In class with a tablet,
studying History and Science in English,
in the workshop with a master artisan.

. SCHOOL PROPOSITION

Build your future in the school of tomorrow, where you learn by doing, a place where the workshop is a classroom and vice versa. A place where schools and businesses are not two different worlds, but one unique world, a “school-enterprise”, where studying meets working. A school that is always in contact with the reality of work, and that helps the students not only through internships in various businesses, but also by inviting in entrepreneurs for lectures in class. It is a school which analyzes the arts, mathematics and Italian from the viewpoint of activity in the “real world” of work. The cultural aspect is highly considered as well. It is, finally, a school in which technology is used every day in class, a place where one learns but also is prepared to face the working environment of tomorrow. It is, therefore, not just a school but also a workshop with modern technology, similar to the workshops where Michelangelo and Leonardo Da Vinci were formed during the Renaissance.

OLIVER TWIST SCHOOL
Learn from experience

. THE ORIGINS

Cometa Education and the School Oliver Twist were both born from **the experience of Cometa** and the fact that since 1987 it operates in the hospitality and education sector, helping children and young people. Cometa Education started its activity in 2003 in order to **give to young people a real opportunity for growth**, both through education and training paths and through the acquisition of appropriate skills focused on the **future goal of an inclusion into the world of work**.

Since 2009, the school Oliver Twist opened its doors to those who were looking for these opportunities.

. A TEACHING

No more classrooms but shops, or places where the study is combined with the practice, where students can learn from experience, where teachers become masters and where they teach entrepreneurship and artisan skills. It is a school where research excellence is part of the teaching method, where learning happens through the school-work relationship, with internships and exams directly in the companies. **Cometa has modern workshops**, where students learn English by studying History and Science (these lectures are taught in the English language).

The courses of the School Oliver Twist fulfill the Italian education requirements and is open to children who have completed the Licenza media (Junior High), **issuing qualifications (3 years)** and **professional degrees (4 years)**, with the possibility of completing the fifth year and also to have access to university and public competitions. Under the new legislation, qualifications can be acquired even during the Apprenticeship stage.

. A TECHNOLOGY

Each classroom is equipped with **interactive whiteboard multimedia** and each student is provided with a **tablet**. Lectures, tutorials, study sessions and tests are done online. It is a school that speaks the language of the new generations; of the so-called “digital natives”.

. A METHOD

At the Oliver Twist school, the **attention is given to the individual and his or her personal history**.

This concept is the guiding principle for the construction of a personalized and tailored study program suited to the needs and the specific training of each student; including, the active involvement of the family. The consistent presence of a **tutor in class** is a constant reference for the students. A strong emphasis is given to the students' study orientation, made through constant re-motivation and an assessment of personal skills. The **cultural study** is provided by workshops, meetings with professional workers, various field trips, and movies.

. A PLACE

The Oliver Twist school was designed according to the most modern principles of **environmental sustainability**. Modern and attractive, the school has a nice facility and special attention and care is given also by the students, because the beauty and the **consciousness of beauty** are an integral part of the school's pedagogical approach.

Its excellence is based also on its **efficiency**: the structure is certified by ISO 9001:2008 (quality) and ISO 14001 (environment).
